Badger 5 garbage disposal manual reset button diagram printable version

in order to drain properly. If it is permanently connected to your home's electrical system using permanent means, then it is more important to check the fuse or breaker. If simple troubleshooting tasks do not solve your unit's issues, then it is best to call in the experts to avoid further damaging it. Knock out the knockout! Everyone who's installed a few disposals is aware of this mistake: Forgetting to remove the dishwasher knockout before hanging the unit. However, when it's time to replace the disposal and the sink flange again as part of your garbage disposal installation, you should know that old silicone is much harder to remove than old plumber's putty. But that's why it works better! Things You've Probably Never Cleaned (but Really Should!) Inspect the plumbing first Look for leakage Look over all the pipes under your sink for any sign of leakage before heading to the store to buy a new garbage disposal. (Loosen the other pipe connections, if necessary, to insert the tube back into the tee.) If the old discharge tube is too short, you may have to make a time-wasting trip to the store. If the overload protector has tripped, you will see that the red button has popped out about a quarter of an inch (5mm). Unclog a Kitchen Sink Don't struggle with the snap ring A trick to remove it The snap ring fits into a groove on the lower end of the sink flange. If the motor doesn't start after manually turning it, try pushing the reset button. Rotate the wrench back and forth as shown above until the motor turns a full revolution, then remove the wrench and switch on the motor, gap under the unit so it can drop a bit. If you have a dishwasher, the first thing you should do after removing the disposal from the box is to punch out the knockout with a hammer and a screwdriver. The easiest way to apply that force is to squeeze them together using tongue-and-groove pliers, such as Channellocks. Click here to learn how to clean a garbage disposal Make sure it's broken before starting garbage disposal installation 3 things to try before removing the garage disposal A disposal that seems to be dead might be revived with a simple fix. (If it's hardwired, turn off the breaker.) Remove the rubber baffle inside the drain-most just lift out-and shine a flashlight into the hole. As you can see, each InSinkErator disposer is shipped with a Jam-Buster self-service wrench, which is silver colored and shaped like a small crank about 4 inches in length. They're usually located together in the store. Leave a 1/4-in. You'll need medium or large pliers to do this. You can try gently pressing it, and if it does not stay up, you must wait about 10 minutes to try it again. If the garbage disposal reset button still will not stay in, or if you have to repeatedly reset the overload protector, the disposal may require service or replacement. JavaScript seems to be disabled in your browser. If the new unit's outlet is lower, you must also lower the tee that the discharge pipe connects to. Switch it off, cut off any running water and then insert the self-service wrench into the hole at the center of its bottom and work it back and forth until turning a complete revolution, which will manually crank the unit and free up debris. Then, let the machine cool down for about 5 minutes and press the rest button before you resume use. You can schedule an in-home service with the manufacturer or authorized service center by turning to their official website. Ask at your home center or appliance store, or search online for "garbage disposal with cord attached. Place an old towel under the weight so you don't scratch the sink. Skip to main content Home House & Components Rooms Kitchen Kitchen Drains Time Complexity Cost When you flip the switch to turn on the garbage disposal and all you get is a hum-or a loud, metal-on-metal grinding noise-you know something's wrong. Fish out the knockout by reaching down inside the disposal. If the problem is with the disposer, then you will have the manufacturer test it in its service center, but if the problem is with your electrical system, then of course, you will be responsible for the testing and repairs. First Things First If your Badger 5 garbage disposal unit is not working, first check if it will turn freely with the service wrench that came with its package. To help problems from occurring, avoid feeding it with seafood shells, plastic, glass, large bones, hot liquids (especially oils), metal and caustic drain cleaners. Turn on a cold stream of water and turn the disposal switch to "ON" position, the disposal should now run again. If it's not, you'll have to replace it with one that's slightly longer. Before you learn how to remove a garbage disposal, unhook anything, assemble a support under the unit using a paint can and scraps of wood. Kitchen Ideas: The proper care and feeding of your garbage disposer Weigh down the sink flange Prevent shifting After you install the new sink flange, you don't want it shifting around when you're assembling the parts underneath. However, no product is perfect, and like virtually any garbage disposal unit, the Badger 5 also needs a little extra attention from you from time to time. The ring will pop right off. Put them together in the correct order and try out the locking mechanism. It's really awkward to add these after you have completed this how to install a garbage disposal project. More Tips and Preventive Measures Often, a simple press of the reset button would solve issues with your Badger 5 garbage disposal. Fish out the obstruction with a pair of tongs or needle-nose pliers. Use the same support to help when you are installing a garbage disposal. While preventive measures serve as the most efficient form of maintenance and troubleshooting, you can still turn to some troubleshooting methods that are recommended by the manufacturer before you call in the experts. To be sure, switch the breaker off and on, as well as replace the fuse. If the model you have is hard wired, then you can check for power at the fuse or breaker. Shortcut: Keep the flange If your old sink flange is undamaged and tight, with no signs of leakage, you can probably leave it in place. If your disposer has a cord and there is power to it, it is best to find out how to get an authorized service center for troubleshooting. 15 Things You Should Never Put Down Your Garbage Disposal Support the weight Assemble a support to remove the garbage disposal Garbage disposals can weigh 15 lbs. If the bottom of your sink is quite concave, the old disposal might not contact the flange. It is still best to be safe than risking to forcefully repair the unit yourself and incur costly damage. Making sure that the disposal's switch is turned off, you can locate such a device under the sink and on the bottom part of the unit, facing the floor. Here are three things to try: Look for a jam. It is a red square button that, when it has tripped, you will see the button dropped down about 5 millimeters or a quarter of an inch. Your best bet is to ask a helper to press down on the sink flange, or if you're working alone, find something to weigh it down, such as the old disposal. With the use of a flashlight and a pair of tongs (or an automotive finger gripper or even a bent hanger), remove any foreign objects from it. Also, you should check to see if the reset button popped out, where you need to find out how to reset the unit's overload protector. Prepare for a new discharge tube Save a trip to the store by reusing the discharge tube Your old discharge tube probably won't be the right length for your new disposal. You might want to replace more than just the disposal itself, so you may as well make a list and be prepared before your garbage disposal installation! Originally Published: November 25, 2019 Pull down on the ring with the screwdriver's blade and walk the blade around the ring. If you have questions visit our Contact Us page. (Instructions are included with the new disposal.) Or you can simply buy a new cord and plug when you buy the disposal. Plus, it's easier on the wrists, or more. Loosen the two nuts that connect the tee to the tailpiece above and the trap below. Then, remove the sink stopper and switch the unit on until water is drained to free loose particles from the disposer. Creating that drop may be a small problem if the outlet on your new disposal is lower than the outlet on your old one. Before you jump into removing the old unit, take a few moments to familiarize yourself with all these parts. Try lowering the tee to see if the tailpiece is long enough. Movement of the flange could break the seal between the flange and the sink, inviting a leak. If your unit suddenly stops during operation, it may have a jam in it. If your old unit has a cord and plug, you can remove the whole assembly and reinstall it on the new unit. The lower ring rides up a set of ramps on the upper ring-pretty neat! But the final inch or so of rotation requires a fair amount of force. As part of Insinkerator's wide-ranging line of garbage disposers, the company positions the 1/2-horsepower Badger 5 as a basic model for household use, focusing on durability and consistent performance. New garbage disposalPlumber's puttySilicone Figure A: Figure it out first When you buy a new disposal, the box will contain all the parts you need to install it. Complete DIY projects like a pro! Sign up for our newsletter! Do It Right. Do It Yourself! Disposal system anatomy How to install a garbage disposal and how it all works together If you have a double sink, the best way to plumb a disposal is to run its discharge tube directly to a tee below the opposite sink. Avoid turning it off until the grinding sound stops. Clean It Up. Remember that an unclean garbage disposal that is full of build-up or debris can lead to everything from sluggish performance to weird odor. To avoid this, make sure the new garbage disposal installation kit includes a tube, or buy one separately at the same time for about \$3. Garbage disposal replacement cost: Spend a little more You can buy a 1/3-hp disposal for \$80 or less, but our experts suggest that a more expensive unit with at least 3/4 hp would be a better choice. Removing an old snap ring can be frustrating-unless you know this trick: Starting at the break in the ring, insert a thin-blade screwdriver between the ring and the flange. To find out, remove the old disposal and install the new flange on it. That's a lot of weight to suddenly catch with one hand while you're turning the lower mounting bracket with the other hand. Compare outlet heights Measure the distance A disposal's discharge tube must slant about 1/4 in. The tube must drop about 1/4 in. If it will not turn freely using the wrench, your unit is probably clogged with something that should not be inside it in the first place. For the best experience on our site, be sure to turn on Javascript in your browser. Fortunately, replacing a disposal isn't hard, even if you haven't done much plumbing. Moreover, you can grind hard but small objects, such as ice and fruit pits, to create a scouring action in its chamber, which will help it run more smoothly. After these initial checks are done, it is time to perform the most common troubleshooting work for the Badger 5 disposal unit. In that case, place a can on the flange, then weigh down the can. If the unit still does not function, then the problem may be in the unit itself or in your electrical system, which similarly requires service. If your motor has overheated by working too long, wait five minutes for it to cool down, then push the reset button (it's usually located on the underside of the disposal). Turn the motor manually. Understanding how everything fits together ahead of time will make the job a cinch. You can also clean the unit and make it smelling fresh using astringent oils. If it's too long, simply connect it to the disposal, mark it and cut it with a hacksaw for your garbage disposal installation. Get Rid Of The Obstructions Or Jams. We talked to veteran plumbers and collected their best tips for a smooth, trouble-free installation. If it fits, you can install the new disposal using the old flange. You can also feed an orange or a lemon into the unit to fight foul odor. Press the reset button. If it does not stay in (retracted), wait ten minutes and try again. When you're working under the sink, it prevents the upper mounting bracket from falling off. to 1/2-in. How to Get Rid of Anything Silicone seals best A more reliable seal Plumber's putty is typically recommended for sealing the sink flange to the sink itself, but silicone will provide a more reliable seal. On the other hand, if there is no power to it, then again you have to check its circuit breaker or fuse. Something too tough to grind, such as a piece of glass, could be jamming the motor. Chances are good that the mounting brackets on the new unit will fit just fine. The motor may also have overheated because of a jam. Turn on cold water before you run the unit, feed waste slowly and flush it with cold water for several seconds after you let it grind. As for regular cleaning, make sure you always run cold water mixed with dish soap through the unit after you do your dishes. If your garbage disposal won't run you may need to reset the garbage disposal using the RED overload protector button on the bottom. If the disposal is clogged, if it is run for a very long period of time, if it overheats, or if there is something wrong with the disposal, it will shut down automatically and need to be reset. If you need to replace the splash guard as part of your garbage disposal installation, take a look at this guide. downhill in order for it to drain properly (see Figure A). You do not need to worry about the costs as the Badger 5 comes with a warranty to fix things up due to workmanship or material defect. Unlike prying on the lower ring with a screwdriver or hex wrench-the method recommended in most instruction sheets-squeezing can't disturb the position of the sink flange and cause it to leak. To reset garbage disposal follow these simple instructions: Make sure that the disposal switch is in the "OFF" position. How to Unclog a Sink Don't forget the cord Buy new or reuse the garbage disposal cord Surprise! Most new disposals don't come with a cord and plug. With silicone, there's almost no chance-now or later-that the flange will leak. To give your Badger 5 a thorough clean, plug your sink, fill it with warm water about halfway and mix in some baking soda. To be prepared, measure the distance from the outlet to the top of each disposal before you remove the old unit. Turn off the power and water, then unplug the disposal. From a clogged unit, leaks and slow-draining water, to unusual odor and noises, there are some information you can pick up to always keep your unit in good condition and fix a problem quickly to make it work properly again. Tighten with pliers Easier on the wrists When you hang the new disposal, rotating the lower mounting ring tightens the seal between the disposal and the sink flange. You'll need a hex wrench. Know that the Badger 5 is equipped with a device called an overload protector, which will automatically turn the unit off when there is something wrong, like when it is jammed or running for a very long period of time. Gently press the red button in to reset garbage disposal. If the button does not stay in or if the unit requires you to repeatedly reset the overload protector, the unit might need servicing. You don't want this plastic disc to be the first thing that the disposal tries to grind up! This is also the best time to add the cord and plug to your disposal. If you're not comfortable making electrical connections for your garbage disposal installation, you can buy a disposal that already has a cord attached. In addition, higher-priced disposals are generally quieter and have longer warranties. The more powerful the motor, the less chance it will jam. Some disposals come with one bent at a convenient angle, but if you don't have it, you can buy one at a hardware store or use a standard Allen wrench.
